

# Biomass Wood Pelleting Conference 2017

Production technology for the pelleting of bio-degradable materials for biomass pellets.

## European Pellet Future: Technologies, Markets and Policy Challenges

Both the European and world pellet markets have grown at an impressive rate in recent years. Since 2000, annual world pellet production has increased from just under 2 million tonnes, to around 29 million tonnes in 2015. Close to half of the pellets produced globally are from the European Union. However, great challenges remain ahead for European market players, for example, ensuring sustainable market growth, improving overall sector profitability and risk management or overcoming new technical challenges. Pellets currently offer an efficient, reliable and sustainable energy alternative to the European consumer, and this must continue!

Against this backdrop, the European Biomass Association (AEBIOM) and its sectorial network the European Pellet Council (EPC) will host an International

Pellet Conference on the 14th of June, 2017 in Cologne, Germany. The “European Pellet Future” conference will be held in conjunction with the FVG Select 2017. During this conference, technical and financial topics will be addressed, including but not limited to; pellet quality, pellet safety, cost and energy optimisation and risk management. One of the benefits of attending such AEBIOM conferences is to

receive updates on ongoing EU legislative processes as well as statistical information on bioenergy. This provides participants with a comprehensive overview of the most recent advancements in the sector.

The full conference programme will be available shortly.
